

# Exhibit A

Augmented photograph showing approximate location proposed for the Atherton Channel flood warning station (station) installation, upstream of the Caltrain tracks. Note that the antenna would extend to a height of no more than 12' above the ground surface. The station would be placed behind the Town of Atherton's chain link fence, within the Town's right-of-way (the extension of Dinkelspiel Station Lane). Exact location may change based on final discussion with the Town at the time of installation.

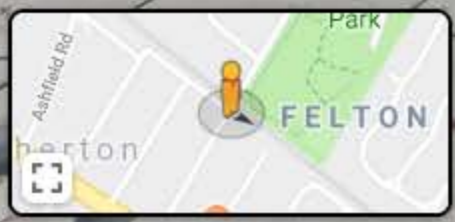

Monitoring station

Conduit runs from monitoring station (protected by concrete cap), then along top of channel wall, to be secured within culvert.

98 Watkins Ave.
